CC -!- FUNCTION: RECEPTOR FOR INTERFERONS ALPHA AND BETA. BINDING TO TYPE
CC -!- FUNCTION: RECEPTOR FOR INTERFERONS ALPHA AND BETA. BINDING TO TYPE
CC -!- FUNCTIONING JAKS, TYK2, STAT PROTEINS AND IFN-R ALPHA-AND BETA-
CC SUBUNITS THEMSELVES,
CC -!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN
CC -!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN
CC -!- SUBCELFICITY: IFN RECEPTORS ARE PRESENT IN ALL TISSUES AND
CC -!- FUM: PHOSPHORYLATED ON TYROSINE RESIDUES BY TYK2 TYROSINE KINASE.
CC -!- SIMILARITY: BELONGS TO THE CLASS II CYTOKINE FAMILY OF RECEPTORS.
CC -!- SIMILARITY: BELONGS TO THE CLASS II CYTOKINE FAMILY OF RECEPTORS.
                                                                                                                                                                                                                                                EMBL; J03171; AAA52730.1;

Transducing molecule, gp130.";

It fansducing molecule, gp130.";

It Genomics 14:666-672(1992).

C -!-FUNCTION: SIGNAL-TRANSDUCING MOLECULE. THE RECEPTOR SYSTEMS FOR C. IL-6, LIF, OSM, CNTF, AND IL-11 CAN UTILIZE GP130 FOR INITIATING SIGNAL TRANSMISSION. BINDS TO IL-61-16. ALPHA CHAIN) COMPLEX, CRESULTING IN THE FORMATION OF HIGH-AFFINITY IL-6 BINDING SITES, CAND TRANSDUCES THE SIGNAL. DOES NOT BIND IL-6. MAY HAVE A ROLE IN C. EMBRYONIC DEVELOPMENT (BY SIMILARITY).

C -!- SUBGELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

C -!- SINGLELIAR LOCATION: TYPE I MEMBRANE PROTEIN.

C -!- SINGLARITY: CONTAINS 1 IMMUNOGLOBULIN-LIKE C2-TYPE DOMAIN.

C -!- SIMILARITY: BELONGS TO THE CYTOKINE FAMILY OF RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     the European Bioinformatics Institute. HO A.S.-Y., Liu Y., Khan T.A., Hsu D.-H., Bazan J.F., Moore K.W.;

"A receptor for interleukin 10 is related to interferon receptors.";

Proc. Natl Acad. Sci. U.S.A. 90:11267-11271(1993).

-I- FUNCTION: RECEPTOR FOR IL-10; BINDS IL-10 WITH A HIGH AFFINITY.

-I- SUBCELULUAR LOCATION: TYPE I MEMBRANE PROTEIN.

-I- SIMILARITY: BELONGS TO THE CLASS II CYTOKINE FAMILY OF RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   198

A Proposed structure of a cytokine-binding region of gp130.*;

EMBO J. 17:1665-1674(1998)

C -1- FUNCTION: SIGNAL-TRANSDUCING MOLECULE. THE RECEPTOR SYSTEMS FOR IL-6. LIF, OSM, CNTF, AND IL-11 CAN UTILIZE Gp130 FOR INITIATING C SIGNAL TRANSMISSION. BINDS TO IL-6/IL-6-R (ALPHA CHAIN) COMPLEX, RESULTING IN THE FORMATION OF HIGH-AFFINITY IL-6 BINDING SITES, AND TRANSDUCES THE SIGNAL DOES NOT BIND IL-6. MAY HAVE A ROLE IN C EMBRYONIC DEVELOPMENT (BY SIMILARITY).

C -1- SUBGUNIT: HETTERODIMER OF AN ALPHA AND A BETA CHAIN.

C -1- SUBGURIT: HETTERODIMER OF AN ALPHA AND A BETA CHAIN.

C -1- TISSUE SPECIFICITY: FOUND IN ALL THE TISSUES AND CELL LINES EXAMINED. EXPRESSION NOT RESTRICTED TO IL-6 RESPONSIVE CELLS.

C -1- SIMILARITY: CONTAINS 1 IMMUNOGLOBULIN-LIKE CZ-TYVED DOMAINS.

-1- SIMILARITY: BELONGS TO THE CYTOKINE FAMILY OF RECEPTORS.

               PT New mammalian soluble interferon alpha-receptor forms - used for pri inhibiting, modulating or modifying the activities of interferon(s) PS Example 2; Fig 7; 46pp; English.

CC (Novel splice-deleted interferon alpha-receptor (IFNAR) form 1 (CC (W21805) is characterised by a new domain (S) which follows an CC (W21805) is characterised by a new domain (S) which follows an CC (W21805) is characterised by a new domain (S) which follows an CC (W21805) is characterised by a new domain (S) which follows an CC (W21805) is characterised by a new domain (S) which follows an CC (W21804). There is no transmembrane domain The amino acid compared to transmembranel CC sequence is predicted from a cDNA clone (see also T73520) obtd.

CC (Splice-deleted forms 1 and 2 (see also W21806) probably regulate CC the response of human cells to IFNs, either by acting as IFN CC antagonists or by regulating the activity of the multiple IFN CC modulate or modify the activities of IFNs alpha and beta in cells, this contains and organisms, or for diagnostic purposes.
                                                                                                                                                                                                                                                                                            24-OCT-1993; IL-107378.

The transmembrane and cytoplasmic domains of the native IFN receptor have been deleted to obtain a soluble, circulating form of the receptor. Potentially immunogenic epitopes have thus been eliminated. Derivatives obtained by substitution or deletion of this sequence are also claimed as are hybrid molecules comprising the soluble receptor (or deriv.) and an immunoglobulin such as IgG1.

Claim 2; Fig 1; S8pp; English.

DNA encoding the water-soluble polypeptide with a high affinity for DNA encoding the water-soluble polypeptide with a high affinity for DNA encoding the water-soluble polypeptide with a high affinity for DNA encoding the water-soluble cloned cDNA as template. For example, bacteriophage lambda ZAP, containing the entire coding sequence of the IFN-alpha and -beta receptor (030533), was incubated with oligos 030534 and 030535. R28496 represents the complete receptor. R28495 lacks the transmembrane and cytoplasmic domains. Both forms bind of the IFN in the same way as antibodies on are immunosuppressants e.g. for treating autoimmune diseases and graft rejection. They lack the contact of the transmender of known immunosuppressants such as steroids.

A recombinant soluble form of the human interferon class I receptor protein extracellular domain, given in R71723, was expressed in either E. coli or COS cell hosts. The protein was used to raise immunomodulatory monoclonal antibodies. Seguence 436 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel splice-deleted interferon alpha-receptor (IFNAR) form 2 (W21806) is characterised by a double deletion when compared to transmembranal IFNAR (W21804). The extracellular domain is shortened by 6 amino acid residues and is followed by a truncated intracellular domain. There is no transmembrane region. The amino acid sequence is predicted from a cDNA clone (see also T73521) obtd. Grown human myeloma U266 cells. Soluble, non-membrane bound IFNAR splice-deleted forms 1 (see also W21805) and 2 may regulate the response of human cells to IFNS, either by acting as IFN antagonists or by regulating IFN activities. They can be expressed in host cells and used to inhibit, modulate or modify the activities of IFNs alpha and beta in cells, tissues and organisms, or for disgnostic purposes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Quality: 340.00
